

Review of: "Groundwater Potential Zone Assessment Using Remote Sensing, Geographical Information System (GIS), and Analytical Hierarchy Process (AHP) Techniques in Fogera Woreda, South Gondar Zone, Ethiopia"

Obed Fynn

Potential competing interests: No potential competing interests to declare.

This paper is not novel, but the outcome of the study is good for the public domain but would require a few reviews. The approach employed has been detailed well enough in other literature, and as such, replicating it in an area where it has not been used is a good thing. I have, though, attached my comments for the authors as supplementary data.
