Thank you for giving me a chance to review this manuscript.

This is an interesting case report about exercises to reduce acute GERD with extensive discussion. The title clearly describes the content of the manuscript. However, the aim of the study hasn't been stated clearly in the introduction.

The case is reported clearly. Findings are also already reported in the results and elaborated in the discussion adequately. The conclusion is also stated briefly and clearly.

Overall, this is a good manuscript to add to the reader's knowledge.
