Potential competing interests: No potential competing interests to declare.

Following are a few observations:

1. Literature searched seems to be insufficient as there are only a few references.
2. Responses collected are not very much in line with the objectives of the study
3. Ethical Approval details were missing.
4. Children were involved in the study which accounted for nearly 25% of the respondents. Questions on Hookah and smoke were there. Inappropriate selection of respondents.
