Dear Author. This subject is slightly out of my scope. As for a quick sanity check, I would recommend paying attention to what Lars Palapies says in his review and doublechecking the following typos:

1. The commonly used notation for the normal distribution is \mathcal{N} rather than Λ ; p. 4.
2. In some instances, there are dots missed when sentences end with formulas. Commas before „where" are missed, etc.
3. In Theorem 3, the bracket $\{$ should be replaced with $\{$.
4. „On the other hand" - Conclusion.
5. The cumulative PDF is usually denoted by CDF; p. 5.
