Potential competing interests: No potential competing interests to declare.

The article provides a comprehensive and detailed overview of measles, covering various aspects such as its history, structure, immunological responses, and potential applications in vaccine development and oncolytic therapy. The abstract effectively summarizes the key points of the article, including the historical context of measles, the development of vaccines, and recent advancements in understanding the immunological responses to the virus. The conclusion summarizes the key findings, emphasizing the importance of measles immunization in preventing pathogenic diseases. The author acknowledges the unknowns in measles research, indicating areas that require further investigation. Overall, the article is well-structured, informative, and provides a valuable resource for readers interested in measles, immunology, and vaccine development.
