Potential competing interests: No potential competing interests to declare.

The absence of a viremia phase in HPV infection questions the efficacy of blood tests. Authors should provide a more detailed description of the HPV clinic. The small number of cases is an important limitation that should be mentioned. The authors can add the study below as a reference to increase the value of the content. Sarier M, Usta SS, Turgut H, et al. Prognostic value of HPV DNA in Urothelial Carcinoma of the Bladder: A Preliminary Report of 2-Year Follow-up Results. *Urol J*. 2021;19(1):45-49. doi:10.22037/uj.v18i.6429
