Potential competing interests: No potential competing interests to declare.

The paper "Effect of supplementation with *Moringa oleifera* on antioxidant and oxidative stress biomarkers of infertile women: a pilot open-label case-control randomized clinical study" has been reviewed by me. I observed that the work is well-written, interesting, and the research idea is sound. I only recommend changing one thing: the author has mentioned some hormonal tests in the methodology of the abstract section, but in the manuscript, there is no data or statistical analysis present. So I think the author should include this data in the results section.

Overall, the manuscript is ready to be published.
