Potential competing interests: No potential competing interests to declare.

The article is very well written in clear language. The authors have a very good understanding of the subject. The article is original. The following could be considered for the improvement of the article:

1. I think it is very important to mention the reasons for the improvement in tensile, flexural, and impact properties for samples 2 and 3 in comparison with sample 1.
2. The data for tensile strain, Young's modulus, flexural strain, and modulus may also be shown and discussed.

I would highly appreciate if you could incorporate the above suggestions in the manuscript.
