Potential competing interests: No potential competing interests to declare.

The same kind of study has already been done locally, as evident from the studies cited by the author.

Introduction can be improved by adding the importance of exposure to sunlight to infants and health problems because of its deficiency. A summary of previous studies can be done in a single paragraph.

Methodology should be more concise; not so many headings.

Discussion and Conclusion should be more elaborate for more policy implications or health education. Don't put general or broad implications; be more specific and mention a strategy and direction for the future.
