Potential competing interests: No potential competing interests to declare.

The topic is good, and the technique used is suitable. The manuscript can be improved significantly by: 1- Making specific subheadings like "Method of Investigation" and "Sources of Data." 2- Many paragraphs do not have any references. The authors added facts without any referencing; this is particularly important in the method of investigation. 3- There is redundancy, and this must be removed. I have not seen any neural network in this investigation. As such, the title should be modified.
