Potential competing interests: No potential competing interests to declare.

The research topic is inline with the study objectives. I have little queries which the authors should address:

1. Sampling size and sampling technique should be included in the abstract.
2. It was stated in the abstract that dietary pattern was determined using 24 hour dietary recall. However, it was indicated under methodology that dietary pattern was determined using food frequency questionnaire. The best method to determine dietary pattern is to use FFQ
3. For the food diversity score, the cut off score for high and low is not indicated. This should be included under the methodology.

Thank you
