Potential competing interests: No potential competing interests to declare.

The topic is very interesting, using mineral admixture in asphalt pavement. Nevertheless, the manuscript poorly describes the issues of concern. The following would be major comments, among others:

1. The literature is very wide and not subjective to the point of research
2. The literature does not end up with a research gap
3. Although there is research significance, it is not clear what is missing that this research is investigating.
4. No analysis or numbers that show how efficient the system adopted in this case study is
5. Comparison is not adequately provided; again, needs numbers like Marshall testing or any other experimental work performed in this case study.
6. Formatting, like justifying the text, clarifying the tables, etc.
