Potential competing interests: No potential competing interests to declare.

This study provides a useful tool to demonstrate the effects of tidal flooding on coastal erosion. However, from the review of the manuscript, there are mandatory improvements to the manuscript before final publication.

## Keywords

It is recommended that keywords that are widely used in the scientific literature be selected. Thus, the authors will ensure that their research has been used by other researchers.

## Introduction

The information provides an understanding of the problem that the research will address; however, citations should be updated to incorporate the challenges facing current science in the face of rising sea levels as a result of climate change. Concepts and acronyms should also be defined before use (e.g., Edukit, SDG).

## Methodology

In this section, you should provide more background on the treatment of qualitative data to determine whether it will be analyzed or just listed, as shown in Table 10. In addition, it is necessary to include references associated with the quotation by Dick and Carry (1996).

## Conclusion

The validation of the education tool seems appropriate; however, for it to be feasible for use in the neighboring region, the challenges that Edukit must address in order to globalize its use must be stated.
