Potential competing interests: No potential competing interests to declare.

This is a very interesting manuscript dealing with a plant with enormous potential, notably nutritional and medicinal. The information provided by the author is very interesting and worth publishing.

Below are some important observations to take into account to improve the quality of writing:

- Title: I suggest "Exploring the Significance and Medicinal Potential of *Rubus fraxinifolius* Poir: A Review"
- Abstract: The author should better organize this section by clearly highlighting the context, the objective, the methodology used for collecting information (bibliographic databases, etc.), the results from the works consulted (briefly) and a conclusion announcing the perspectives to be kept for this plant.
- - Throughout the document, correctly write the scientific names of the plants (see [Plants of the World Online | Kew Science](#)).
- In the development of the text (from the "nutritional composition" section), the author should avoid mixing the name of the plant (ragimot and *R. fraxinifolius*). I advise continuing with the scientific name. The ideal would also be to avoid repeating (by name) the plant at any time. The author can at times replace it with a possessive adjective.
