Autologous Tumor Infiltrating Lymphocytes LN-145

National Cancer Institute

Source

National Cancer Institute. *Autologous Tumor Infiltrating Lymphocytes LN-145*. NCI Thesaurus. Code C135634.

A proprietary preparation of autologous tumor infiltrating lymphocytes (TILs), with potential immunomodulating activity. The autologous TILs are isolated from an autologous tumor sample and expanded ex vivo in the presence of interleukin-2 (IL-2). Upon infusion of the autologous TILs LN-145 back into the patient, the cells specifically recognize, target and kill the patient's tumor cells.
