# Vulvar Verrucous Carcinoma

National Cancer Institute

## Source

National Cancer Institute. *Vulvar Verrucous Carcinoma*. NCI Thesaurus. Code C6383.

A highly differentiated squamous cell carcinoma that arises from the vulva. It is characterized by the presence of a warty and hyperkeratinized surface, malignant cells with abundant eosinophilic cytoplasm, minimal cytologic atypia, and absence or rarity of mitotic figures. The tumor infiltrates the underlying stroma with a pushing border.
