NDN wt Allele

National Cancer Institute

Source

National Cancer Institute. *NDN wt Allele*. NCI Thesaurus. Code C107135.

Human NDN wild-type allele is located within 15q11.2-q12 and is approximately 2 kb in length. This allele, which encodes necdin protein, is involved in suppression of cell growth in postmitotic neurons. Mutations in this gene are associated with Prader-Willi syndrome.
