Potential competing interests: No potential competing interests to declare.

I think Covid-19 should be COVID-19 because it's the abbreviated word.

Abstract

- Why did researchers show only 3 associated factors (2 predicting, 1 protecting factor)? That in the conclusion part, there were more than 3 factors.

Methodology

- Researchers should give a reason for not recruiting participants lower than 18 years old.
- The sample size was 385, 10% added = 424, but the total was 504. It's not 10% added, but approximately 31% added.
- Recheck and make clear – the study area has 4 districts, 4 villages from each district, 15 households from each village, 2 participants from a household = 480 participants, not 504 as researchers presented.
- What was your research tool? Structured interviews or a questionnaire?
