Potential competing interests: The author(s) declared that no potential competing interests exist.

The effect of ascorbic acid on haematological cancer is a good association, but Ascorbic acid at the same time has a positive effect on the cancer cell and a negative impact on the novel agents that have been used for haematological cancer treatment. Therefore this issue needs further study.

The article needs more information and mechanisms about how Ascorbic acid enhances the immune cells against cancer.

Finally, writing at the beginning of sentences should not be started with a word abbreviation like AA, It should write completely Ascorbic Acid
