Potential competing interests: No potential competing interests to declare.

- How was the sample size and the sampling method determined for the study? Was it representative of the population of interest?
- What were the criteria for selecting the danger signages and the pedestrian norms for the standardized pictorial flow chart? How were they validated for reliability and accuracy?
- How was the correlation between the relevant factors and the reports of accidents by commuters in those areas measured? What statistical methods and tests were used to analyze the data?
- How did the study ensure the ethical and legal compliance of the survey team, the consent of the commuters, and the protection of the personal data of the participants?
- Explain the practical implications of this paper.
- Language revision throughout the manuscript is needed to remove grammatical errors and make the language more technical.
