

Review of: "Toxicological evaluation of aqueous extracts of *Clematis hirsuta* and *Rhamnus prinoides*"

Fernanda Bruxel

Potential competing interests: No potential competing interests to declare.

The revised article is able to be accepted for publications with major revisions. I suggest that the authors rewrite the results, as they are only cited and can be explored more precisely. Likewise, the images need to be improved. And yet, the conclusion can also be further explored. Other comments are cited in the text. Review the information and after, it may possibly be accepted.
