Abstract

1. One comprehensive paragraph is sufficient for the summary.

Introduction

1. A more comprehensive literature review should be conducted. I suggest that the literature review regarding the proposed study be expanded, and the introduction be written better.
2. It should be compared with previous studies. The difference and superiority of the proposed study from previous studies should be clearly stated. Why was the proposed study done, or why is the proposed study needed, or what is the innovation that the proposed study adds to the literature?
3. Pay attention to punctuation! (Some dots were forgotten, some sentences start with lowercase letters). There is no tense harmony in the sentences.

Data Sources and Methodology

1. Provide more information, e.g., go to the website to download data.
2. Which scenarios were used should be better explained.

Results and discussion

1. **2.2.** The sentence should start with a capital letter (correct such errors throughout the work).
2. The results need further explanation. I suggest you rewrite the results.

Conclusion

1. Conclusions should be written better to include the results of the study.
2. Result and conclusion parts need to be written in a way that addresses the causes.

References

1. More recent studies should be reviewed and added to the proposed study.
2. Please properly cite references in the text. The reason behind it should be explained rather than what it found.

It should be written in better English!
