"The Disruption of the COVID-19 Pandemic on Farm Produce and its Implications for the Future of Food Security - A review".

The authors have made significant contributions, especially in the agriculture sector. Manuscripts are presented in a comprehensive, structured and good supporting data. I am interested in the Framework for ensuring Global future of Food Security in Post COVID-19 section. After COVID-19, one of the real actions in Food Security is to build a sustainable food industry. Maybe it can be explored for this section.
