Potential competing interests: No potential competing interests to declare.

Well-researched and systematically constructed article. I thank the authors for their hard work. As is evidenced by the lack of literature on animal infestations, this review article helps bring out the fact that there is a need for better reporting and documentation of such infections in order to ascertain their impact on the environment and studies to determine treatment protocols for them.

Any zoonotic infection has the potential to eventually become an epidemic if ignored. We need to highlight the importance of changing trends in animal infestations/infections to predict possible future implications on humans.
