

Review of: "Prevalence and Associated Factors of Hemorrhoids and Other Perianal Complications During the Puerperium Among Mothers Who Gave Birth at Debre Tabor Referral Hospital, Debre Tabor, Ethiopia, 2022"

Krishnapriya Leela

Potential competing interests: No potential competing interests to declare.

Well-written article with a good number of references. Good description of methodology, discussion, and conclusion. Comparison done between patients with the disease and those who didn't have the problem. Tables adequate and appropriate.

Title of study could have been shorter. Mention of macrosomia as a cause for fissure mentioned, but not seen in tables. Description of the type of perineal tear with separate analysis would have been better.
