Review of: "Bridging the Language Divide in UK Paramedic Care: An Atomic Article Reviewing Challenges, Strategies, and Emerging Innovations"

Hany Akeel Al-hussaniy¹

1. University of Baghdad, Iraq

The review article "Bridging the Language Divide in UK Paramedic Care: An Atomic Article Reviewing Challenges, Strategies, and Emerging Innovations" addresses an important healthcare equity issue and successfully highlights how language barriers may negatively influence the quality of prehospital emergency care; however, the article shows several weaknesses that limit its academic strength. The review is relatively superficial and descriptive, lacking a clearly defined systematic methodology such as a search strategy, inclusion/exclusion criteria, or quality assessment of included studies, which reduces transparency and scientific rigor. Additionally, the article relies on a limited number of references and provides minimal critical synthesis or comparative evaluation of existing interventions, making its conclusions somewhat generalized. The manuscript also lacks quantitative data analysis, policy framework comparison, and practical implementation models that could improve its translational value. To improve article quality, the author should adopt a structured review methodology (e.g., a PRISMA-guided approach), expand literature coverage with more recent and international evidence, include comparative evaluation of digital translation technologies and interpreter models, and provide clearer clinical or policy recommendations supported by evidence-based outcome data.
