

Review of: "Investigations on Input Impedance and Radiation Pattern of a UWB Antenna for Microwave Imaging"

Kailash V. Karad

Potential competing interests: No potential competing interests to declare.

1. Authors have tried to explore the things from a medical application point of view.
2. As per the title of the manuscript, no analysis or work related to input impedance was found.
3. Also, how the antenna will be useful for microwave imaging is not clearly described or tested.
4. Novelty is absent.
5. Figures are not formulated properly.
6. Literature is not properly articulated.
7. It is difficult to claim the UWB antenna as results are obtained from 4 GHz onwards.
