Potential competing interests: No potential competing interests to declare.

There are some problems that need to be improved.

- 1 The description of the abstract is confusing and lacks a detailed description of the results. Authors need to be clear about what problems were solved and what results were achieved.
- 2 The literature review is not academic enough and should not simply describe the sensors. Some unnecessary figures are suggested to be removed. The authors should reorganize the related work according to the research questions.
