Galactocerebrosidase

National Cancer Institute

Source

National Cancer Institute. *Galactocerebrosidase*. NCI Thesaurus. Code C121620.

Galactocerebrosidase (685 aa, ~77 kDa) is encoded by the human GALC gene. This protein is involved in hydrolysis of galactose ester bonds of galactosylceramide, galactosylsphingosine, lactosylceramide, and monogalactosyldiglyceride.
