Potential competing interests: No potential competing interests to declare.

1. The word "free" before 'referral cases without medical transport' is redundant.

- Page 5, 2nd paragraph.

2. When one dependent variable and more than one covariate are considered in a regression analysis, univariable and multivariable analyses are more appropriate than univariate and multivariate analyses. Please change these terms.

3. The word "discharge by evacuation" is confusing since 'evacuation of the uterus' is something else; and therefore, if you wanted to mean 'transfer to a higher level facility,' this should be made clearer.

4. Paragraphing needs improvement; for example, some paragraphs in the discussion have only a sentence or two.
