Potential competing interests: No potential competing interests to declare.

As a blind peer reviewer of this manuscript, I still observed some modifications which the authors failed to incorporate in the manuscript. I went through the entire manuscript after the first round of review and pointed out 4 constructive comments; the authors incorporated all the comments in the manuscript. After I carefully read the manuscript after the first round of review, there are some rectifications and corrections that the authors should address.

At first, I went through the authors' previous work based on reference no. 4 given in the manuscript. The URL is also given along with the DOI.

https://www.researchgate.net/publication/376206296_The_theory_of_informity

When I click the DOI, again it goes to the ResearchGate site. I just want to know if the theory of informity is a textbook written by the author or if it is a peer-reviewed manuscript already published. If it is,

1. Mention the name of the journal it was published in, along with the volume, issue, page no. Everything should be shown in the reference section of the manuscript.
2. If it is a textbook, show the edition, publisher, year in the reference section.

Hence, **I recommend the editor accept the manuscript for publication after the corrections are incorporated by the author.**
