Gail Risk Model

National Cancer Institute

Source

National Cancer Institute. *Gail Risk Model*. NCI Thesaurus. Code C19665.

A computer program developed through the National Surgical Adjuvant Breast and Bowel project. Estimates risk of breast cancer based upon current age, age at menarche, age at first live birth, number of first-degree relatives who have had breast cancer, number of breast biopsies, and number of biopsies with atypical hyperplasia. Results are presented as risk of breast cancer, as a percentage, within the next five years or over a lifetime.
