Potential competing interests: No potential competing interests to declare.

The manuscript explores the concept of entrepreneurial ecosystems in developing economies and highlights the need for a deeper understanding of the complexities underlying the emergence of sustainable ecosystems that promote productive entrepreneurship. The authors emphasize the limited understanding of the specific circumstances driving sustainability within these ecosystems and their influence on entrepreneurial activities and outcomes.

The paper aims to contribute to the literature on sustainable entrepreneurial ecosystems by proposing a conceptual framework, which enables empirical assessments and the operationalization of concepts using a complex adaptive systems approach. By developing such a framework, the authors provide a valuable tool for researchers and policymakers to study and foster sustainable entrepreneurial ecosystems in developing economies.

Overall, the manuscript addresses an important gap in the understanding of entrepreneurial ecosystems in developing economies and offers a valuable contribution to the literature. The proposed conceptual framework has the potential to guide future research and inform practical interventions aimed at promoting sustainable entrepreneurship.
