INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Cystic fibrosis-gastritis-megaloblastic anemia syndrome. ORPHA:2575*

Cystic fibrosis-gastritis-megaloblastic anemia, or Lubani-Al Saleh-Teebi syndrome, is a rare genetic disease reported in two siblings of consanguineous Arab parents and is characterized by cystic fibrosis, gastritis associated with *Helicobacter pylori*, folate deficiency megaloblastic anemia, and intellectual disability. There have been no further descriptions in the literature since 1991.
