Comments on Research Paper on women's decision choosing a public or private health facility for tuberculosis (TB) services in Nepal

This is a timely article on the Factors influencing women's decision choosing a public or private health facility for tuberculosis (TB) services in Nepal.

The methodology adopted for the study is appropriate. The method of data collection and analysis is suitable for the study. The paper makes a valiant effort in bringing into focus the socioeconomic variations such as rural-urban, religion, class and education in the context of women's decision-making in accessing health care facility. A more comparative analysis of these dimensions selected by the author/authors can further strengthen the central argument of the paper.

There are plenty of grammatical errors or certain words are missing in the sentences. The author/s are needed to proof-read the article before submitting it to the journal.

I recommend the publication of this article in your Journal.
