Review of: "Growth, Instability and Trend Analysis of Rice Production Indicators in Nigeria"

Faisel Mohammed[1]

1 University of Baghdad

Here are some potential failures of this report:

1. Data limitations: The report notes that one of the most notable limitations is the lack of recent data on rice production indicators until 2022. This means that the report does not include recent data and may be out of date with recent developments in the rice industry in Nigeria.

2. Lack of specific funding: The report indicates that no specific funding was received for this work. The lack of specific funding may impact the study's ability to carry out a comprehensive research process and use advanced analysis methods.

3. Lack of data: The report also notes that it suffers from a lack of current data on rice production indicators in Nigeria. This may affect the accuracy of the analysis and the study's ability to identify current trends and evaluate influencing factors.

4. Lack of analysis of other factors: The report mainly focuses on area of land under cultivation and rice productivity as key factors for analyzing the rice industry in Nigeria. It may be useful to analyze other factors such as technology used, market trends, environmental and political challenges affecting the rice industry.
