Review of the manuscript titled Coronavirus COVID-19: A Short Review on the Psychological Effects of Coronavirus, How It Disturbs Social Life, Its Mechanism to Affect the Central Nervous System, Possible Modes of Transmission, and the Smart Lockdown Policy of Pakistan.

This is a comprehensive analysis of the societal consequences of COVID-19, encompassing the modes of transmission and the health concerns associated with it. I would like to provide the following feedback and recommendations:

1. Throughout my extensive experience, I have encountered over 200 reviews in this particular field since 2020. The majority of these reviews have focused on the potential ramifications of COVID-19 on a global level. This review, however, is one among the same. The key question at hand is how to differentiate it from the rest. To achieve this, it is imperative to establish a clear objective for transforming this work into a post-COVID case study in Pakistan. Additionally, it is crucial to categorize various cases within the diverse cross section of the community.
2. A comprehensive survey and the subsequent statistical analysis reveal empirical correlations and alterations in lifestyles following the COVID-19 pandemic, thereby shedding light on the prevalent diseases caused by the outbreak. This document holds significant importance for the healthcare industry.
3. The abstract needs to be rephrased as it lacks a clear objective, and the objective is already mentioned in the title, which diminishes its appeal.
4. Therefore, I suggest including the quantity of respiratory cases, cardiovascular cases, pneumonia, cardiology, and other related factors to support the claims regarding health concerns. This will set your review apart from others.
5. Similarly, a crucial aspect of manuscript preparation is of utmost importance. For instance, have you obtained any novel findings following the elucidation of aerosol transmission and droplet transmission? If you were able to establish a correlation between seasonal atmospheric variations and social distancing practices in Pakistan, it would undoubtedly contribute as ground-breaking information.
6. Therefore, I propose a complete overhaul of the theme and dedicate efforts towards crafting a high-quality scientific manuscript.

My best wishes.
