

Review of: "Comparison of Vegetation Community Diversity, Biomass, and Sediment Properties among Constructed and Reference Salt Marshes at Deer Island, Mississippi, U.S.A."

Viyaktha Hewageegana

Potential competing interests: No potential competing interests to declare.

The paper discusses the comparison between constructed and natural marsh areas in the context of vegetation and sediment characteristics. The article is well structured and written. The Findings are germane in the current context.

Will the transect be sufficient to represent the marshes?

Please provide at what distance the quadrat samples taken along a transect.
