Potential competing interests: No potential competing interests to declare.

Regarding the mentioned article, the following can be mentioned:

1. In the used method (failure mode and effect analysis method (FMEA)), both the severity of the effect and the probability of occurrence of each risk should be displayed separately (in a separate table), which has not been completed.
2. The intensity of the effect may be from very severe to insignificant.
3. The probability of occurrence ranges from certain to improbable.
4. The choice of methods to deal with the risk should be specified for each of the identified risks.
5. There are four ways to deal with risk (avoidance of risk, reduction of risk, transfer of risk, and ignoring of risk), none of which is specified in this article.

In general, it can be said that from the point of view of identifying the risks, their impact and intensity, and the solution to deal with them, no appropriate decision has been made.

And the article needs a strong revision.

Best regards,

Eissa Jabbarzadeh
