Review of: "Driving Circular Innovation: From Business Model to Industrial Ecosystems"

Antonella Zucchella¹

1. University of Pavia, Italy

The paper provides some promising insights about concepts like circularity, business models, and ecosystems. The main issue, in my opinion, is a lack of connectedness among the various parts and the different concepts. I also only partially agree with some sentences in the introduction about the circular economy concept and its foundations. The methodology is not very well described. Circular ecosystems have been analyzed by different authors, under the lens of circular ecosystemic business models and under the lens of industrial symbiosis. It is unclear how the concept proposed in this paper differs (if it does) from the other ones.
