

# Review of: "Molecular docking assisted biological functions and phytochemical screening of *Amaranthus lividus* L. extract"

Dr. Muhammad Awais

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The idea of phytochemical analysis is not new to the science of plant biochemistry but the authors have very uniquely presented this idea to relate it with in silico work which is more helpful in understanding the molecular interactions and get an insight of mechanism of action.

Extensive data experimentation sets have been presented and discussed very scientifically to sufficiently warrant the publication this material.
