

Review of: "Machine Learning Methods in Algorithmic Trading: An Experimental Evaluation of Supervised Learning Techniques for Stock Price"

Jasmine Sabeena

Potential competing interests: No potential competing interests to declare.

- Can you provide more details on the data sources used for this research and the preprocessing steps?
- How was the data partitioned for training and testing? Were there any specific considerations in this process?
- What drove the selection of the NBeats, NHits, Transformers, RNN, and LSTM models, and were there any specific modifications made to these models?
- How did the models perform in terms of accuracy, precision, and generalization when compared to one another?
