Potential competing interests: No potential competing interests to declare.

I have examined the relevant study, and the work is interesting, but revisions are required to make the subject more comprehensible.

I have the following comments and suggestions for the author:

1. Equations must be numbered and related.
2. References should be given to ensure that the work is understandable.
3. The reference list should be added at the end of the study.
4. The 'introduction' title is inadequate to understand the study.
5. The conclusion should be before the appendix.

This article needs to be reviewed again in a revised format based on the suggestions above. The subject and the procedures can be examined more thoroughly in light of the relevant references. When relevant additions and corrections are made, detailed questions on the subject will also be answered. After further review, the study may be deemed suitable for publication.

Best regards.
