Potential competing interests: No potential competing interests to declare.

I want to congratulate the author for answering these important questions related to work and environmental hazards among welders.

There are a few sections which can be improved.

1. Please elaborate on the inclusion and exclusion criteria. There were patients who had ocular diseases, including cataract and glaucoma. Addressing the compounding factors in the analysis part is crucial. Did you exclude these patients from the study?
2. The methodology and discussion parts need to be rewritten.
3. Discussion: paragraph 4, please change it to "our study" from "My study."
4. Missing citations, inconsistent format.

Good luck!
