Potential competing interests: No potential competing interests to declare.

The title is clear, as it is a comparison of two separate periods.

The abstract is also concise, with some typos and grammatical errors.

Concerning the methodology, what trial design is this? Maybe the author should explain more.

For the results, the predicted deaths seem so high. Does it tally with what was observed by surveillance data?

There is statistical analysis done on the results. Maybe some inferential statistics can be applied.

Lastly, the writing is not academic. The author should improve on this.
