Review of: "EEG-based Emotion Classification using Deep Learning: Approaches, Trends and Bibliometrics"

MANIKANDAN Manikandan[1]

1 E.G.S Pillay Engineering College

The paper read by me is good overall. The below questions need to be answered:

1. What are the parameters used to set the test environment?

2. How will you measure the efficiency, and do you have any metrics for that?

3. What characteristics will be taken for setting up the experiments?

4. What factors are used to compare your proposed methods?

5. What kind of testing environment was used for designing your work?
