The results of the work are interesting and useful. The article needs to check spelling: the plural of "fish" is "fish". In the title, the species must be written in italics, and "punctatus" should not be written with a capital letter. Also, needs to check the subscripts and superscripts in chemical formulas, and the space between words. It is necessary to specify how many specimens were used in the test and for how long they were exposed to cadmium. In the conclusions, it is too risky to assume that the decreased activity of enzymes is caused by cadmium because other toxic substances, such as some pesticides, can cause the same effect, as mentioned in this article.
