## Minor Issues

### **ABSTRACT:**

- There are logic problems in the abstract of this paper. The abstract lacks detail of research method. The author should revise it.

### **INTRODUCTION:**

- The authors presented the introduction of the research. Unequivocally and undeniably, the studies are of scientific novelty and are of interest to science, but it is not clearly described on why six parameters of IC, RT, DSL, DSIE, BA and DL were chosen.

### **NUMERICAL ANALYSIS:**

- The author used only one case study to carry out the validity of the model, and conclude the result based on one case study. I think that the authors should have looked for more case study or do a simulation based on more data to conclude more properly.

### **CONCLUSIONS:**

- I think there is a problem with delivering a conclusion of the model only with one case study. Suggest that the author revise it.

## General Comments

Finally, I hereby recommend that the author to make minor corrections.
