Potential competing interests: No potential competing interests to declare.

I wholeheartedly, appreciate the work done by the authors but changes are necessary which are:

1. Correct the language (English) of the article, I found some typos in the structure of sentences.
2. Try to cite recent articles (2023), in introduction regarding prevalence (cases per year), and incorporate also in discussion portion.
3. Don't repeat the word "According to report from"...
4. Correct the whole sentence " The aim of the present study was therefore to".... Replace with "Therefore, the present study was aimed to determine.....
5. I would suggest the authors to focus on their findings re-tally with literature in discussion.
