Myelin-Associated Glycoprotein Antibody

National Cancer Institute

Source

National Cancer Institute. *Myelin-Associated Glycoprotein Antibody*. NCI Thesaurus. Code C121771.

An autoantibody directed against myelin-associated glycoprotein (MAG). It is associated with active demyelination in peripheral neuropathy and is detected in about 50% of patients with IgM paraproteinemia and may occur in some patients with multiple sclerosis, Guillain-Barre syndrome, chronic polyneuropathy, or myasthenia gravis.
